Water Test Results

Customer: _____

Date: _____

Residence Information & Name: _____

Results: pH _____ Iron _____ Hardness _____

Recommendations*:

Test performed by: _____

Date: _____

Equipment Quote: _____

*Please Note: These results and recommendations are the opinion of Hajoca Corporation after testing with basic level testing equipment. Further tests may be required to completely purify the water. These recommendations may or may not solve all of your problems. We have the ability to have your water tested for bacteria and recommend this testing for homes close to farm-land where a bacterium is most likely to develop. It is the homeowner's responsibility to preserve and protect their health and plumbing system from damage and abuse by controlling the molecular structure of their water. Many faucet and fixture manufacturers' warranties are voided with non-treated problematic water which may corrode and destroy the internal parts of many plumbing fixtures.
